Fearfully & Wonderfully Made

Fingernails and toenails are made of a tough protective protein called alpha-keratin. This protein is also found in hooves and horns of animals. They are not made of bones

In humans, the nail of the index finger grows faster than that of the little finger; and fingernails grow up to four times faster than toenails.

In humans, nails grow at an average rate of 3 mm (0.12 in) a month and so fingernails require three to six months to regrow completely, and toenails require twelve to eighteen months. The longest female nails to ever exist measure a total of 601.9 cm

Daniel 4:33

"Immediately the word concerning Nebuchadnezzar was fulfilled; and he was driven away from mankind and began eating grass like cattle, and his body was drenched with the dew of heaven until his hair had grown like eagles' feathers and his nails like birds' claws.
