Fearfully & Wonderfully Made

What makes you a boy or girl?

All normal egg cells produced by a human ovary have an X chromosome.

Half of the sperm carry an X chromosome, and half a Y.

So a human baby's gender is determined by the sperm that fertilises the egg cell. The baby will be a girl if it carries an X chromosome. It will be a boy if the fertilising sperm carries a Y chromosome.

The Y chromosome carries a gene called the 'sex-determining region Y', or SRY for short. The SRY gene causes testes to develop in an XY embryo. These produce androgens: male sex hormones. Androgens cause the embryo to become a male. Without them, the embryo develops into a female.

He created them male and female, and blessed them and called them Mankind in the day they were created. Gen 5:2

Fearfully & Wonderfully Made is sponsored by the Health Ministries Dept.

*Please note the service is recorded and streamed live during the Divine Service programme.
